Summary

Full-stack developer and B.Tech CSE student at Amrita Vishwa Vidyapeetham (2024-present) delivering practical campus and community products through modern web, backend, and blockchain tooling while staying focused on clean interfaces and reliable systems

Education

B.Tech Amrita Vishwa Vidyapeetham, Bengaluru, Computer Science and Engineering
Bengaluru, India
Aug 2024 – present

Experience

GDG Amrita Vishwa Vidyapeetham, Cloud Engineer
Bengaluru, India
Sept 2024 – present

- Support study jams and club demos by preparing cloud-native samples and helping peers ship them

Dastaan Tech Fest 2024, Event Organizer
Bengaluru, India
Oct 2024

- Coordinated IBM's cloud-native language workshop, covering logistics and on-site execution

Projects

PharmaChain - Blockchain Medicine Tracker
Apr 2024 – present

Blockchain-powered supply chain visibility platform for pharmaceutical batches

- Built Rust backend services exposing REST APIs to a React + TypeScript dashboard
- Added role-aware batch provenance and medicine history tracking for hospitals
- Prototyping Merkle tree verification to enable tamper-evident auditing

IntelliQuery - Natural Language SQL Engine
Sept 2024 – Dec 2024

Java service that turns natural-language questions into SQL and explains results for non-technical teams

- Integrated LLM pipeline translating questions into optimized SQL executed on MariaDB via JDBC
- Produced friendly result summaries so HR, admins, and leads can act on data without SQL expertise
- Designed modular architecture enabling conversational access to enterprise datasets

College Canteen Digitization System
2024

Team-led effort to digitize campus canteen ordering with end-to-end web access

- Co-developed ordering, menu, and staff dashboards using Node.js, Express, MongoDB, and campus cloud APIs
- Released a Create React App interface for students to browse, order, and track pickups on any device
- Automated queue updates and payment confirmations to reduce wait times while keeping a clean interface

Campus Carpool Platform
July 2024 – present

Ride-sharing web app for students and faculty built with Next.js, Supabase, and a Create React App client

- Designed Supabase data model with row-level security for rider and driver info
- Added ride pinging, time-based matching, and notifications via Edge Functions and realtime
- Delivered a Create React App interface for campus users with reusable components and a clean experience

Skills

Development: Java, Python, Rust, React, Node.js, Express, Spring Boot, Cloud APIs

Platforms & Tools: Ethereum fundamentals, Solana (Rust), Supabase, Docker, MongoDB, PostgreSQL, Figma
